ANNALI IDROLOGICI 2007

PARTE PRIMA

Regione Liguria

Indice Annale Idrologico Parte I

Premessa	pag. i
----------------	--------

SEZIONE A - TERMOMETRIA

Abbreviazioni e segni convenzionali	pag. 1
Contenuto delle tabelle	pag. 1
Consistenza della rete termometrica	pag. 2
Elenco e caratteristiche delle stazioni termometriche	pag. 3
Tabella I - Osservazioni termometriche giornaliere	pag. 5
Tabella II - Valori medi ed estremi della temperatura	pag. 69

SEZIONE B - PLUVIOMETRIA

Abbreviazioni e segni convenzionali	pag. 85
Terminologia	pag. 85
Contenuto delle tabelle	pag. 85
Consistenza della rete termometrica	pag. 86
Elenco e caratteristiche delle stazioni pluviometriche	pag. 87
Tabella I - Osservazioni pluviometriche giornaliere	pag. 90
Tabella II - Totali annui e riassunto dei totali mensili delle quantità di precipitazione	pag. 130
Tabella III - Precipitazioni di massima intensità registrate ai pluviografi	pag. 133
Tabella IV - Massime precipitazioni dell'anno per periodi di più giorni consecutivi	pag. 136
Tabella V - Precipitazioni di notevole intensità e breve durata registrate ai pluviografi	pag. 139
Tabella VI - Manto nevoso	pag. 150

APPENDICI

Caratteristiche tecniche sensori	pag. 151
--	----------

Premessa

L'elaborazione degli Annali Idrologici è stata curata storicamente dagli Uffici Compartimentali dell'ex Servizio Idrografico, divenuto in anni recenti Servizio Idrografico e Mareografico Nazionale (SIMN), inizialmente afferente al Genio Civile del Ministero dei Lavori Pubblici e successivamente al Dipartimento per i Servizi Tecnici Nazionali. In particolare, l'Ufficio di Genova ha iniziato la pubblicazione degli Annali Idrologici nel 1932, seppure osservazioni registrate sul territorio ligure ed afferenti alla rete del SIMN vennero già pubblicate dal 1916 a cura dell'Ufficio di Pisa.

In attuazione del processo di decentramento amministrativo previsto dalla Legge 59/97, così come disciplinato dal D.Lgs 112/98, con il Decreto della Presidenza del Consiglio dei Ministri del 24/07/2002 sono stati trasferiti alle Regioni ed incorporati nelle strutture regionali competenti in materia, gli uffici compartimentali e le stazioni distaccate del SIMN a far data dal 1/10/2002.

Da tale data la Regione Liguria ha conseguentemente acquisito sia il sistema di rilevamento del Compartimento di Genova del SIMN (SIMGE) sia le altre stazioni posizionate sul territorio ligure e precedentemente di proprietà del Compartimento di Parma.

Nel territorio di propria competenza la Regione Liguria aveva già realizzato, in forza dell'attribuzione alla Regione stessa delle competenze nel campo della previsione, prevenzione e soccorso effettuate dalla Legge 225/92, il Centro Meteo Idrologico Regionale (CMIRL), gestito da ARPAL dal 2001 con la precipua funzione dell'espletamento delle attività di monitoraggio e previsione meteoroidrologica a supporto del settore di Protezione Civile ed Emergenze in situazioni di rischio e/o allerta nonché come servizio pubblico alla cittadinanza.

Nell'ambito delle competenze del CMIRL, ARPAL gestiva dal 2001 la rete osservativa OMIRL (Osservatorio Meteoroidrologico della Regione Liguria): in tale contesto la Regione Liguria, in pregio ai principi di economicità, efficienza ed efficacia nonché individuando un processo di armonizzazione e potenziamento delle funzioni meteoroidrologiche regionali, ha affidato ad ARPAL, già a far data dal 01/01/2003 tutte le competenze inerenti le reti di monitoraggio idro-termo-pluviometrico (OMIRL ed ex-SIMGE) e la compilazione, dall'annualità 2003, degli Annali Idrologici.

Parallelamente, il CMIRL è diventato Centro Funzionale Meteo Idrologico di Protezione Civile della Regione Liguria (CFMI-PC) nell'ambito del "Programma Nazionale di Potenziamento delle Reti di Monitoraggio meteo-idro-pluviometrico" elaborato in attuazione dell'art. 2, comma 7, del D.L. 11/6/1998, n. 180, convertito in legge n. 267 del 3/8/1998, ed è stato dichiarato operativo con i Decreti Presidenziali della G.R. n. 22 del 24/03/05 e n.45 dell' 01/07/05, ai sensi della Direttiva PCM del 27/02/04.

Con la Legge Regionale n. 20 del 4/08/2006 tutte le attività di cui sopra sono state inserite fra i compiti istituzionali obbligatori del Centro Funzionale Meteoroidrologico di Protezione Civile della Regione Liguria.

A seguito dell'unificazione, del potenziamento e dell'ottimizzazione delle reti osservative preesistenti, l'attuale rete OMIRL gestita dal CFMI-PC rileva e rende disponibili un numero più consistente di dati rispetto al passato, come emerge a partire dall'Annale Idrologico 2004.

Gli standard di rilevazione ed elaborazione omogenei sono stati mantenuti in linea con la metodologia già in uso presso il SIMN e in conformità a quanto prescritto dal *World Meteorological Organization* in materia di osservazione e trattamento dei dati meteorologici.

Il Dirigente UO CFMI-PC
Dott.ssa Elisabetta Trovatore

SEZIONE A - TERMOMETRIA

Abbreviazioni e segni convenzionali

Termometro a massima e minima	Tm
Termometro registratore	Tr
Termometro elettronico	Te
Dato incerto	?
Dato mancante	>>
Dato interpolato	[]

Sono stampati in **grassetto** ed in *corsivo* rispettivamente i valori massimi ed i minimi.

Contenuto delle tabelle

I dati sono trasmessi da osservatori o da stazioni termopluviometriche controllate o dipendenti direttamente da ARPAL.

Ogni stazione meccanica è fornita di un termometro a massima e di un termometro a minima oppure di un termometro a massima e a minima uniti.

Le stazioni sono ordinate nelle tabelle secondo la rispettiva posizione idrografica.

Le tabelle sono precedute dall'Elenco e caratteristiche delle stazioni termometriche che hanno funzionato nell'anno.

Tabella I - Per le stazioni che hanno regolarmente funzionato nell'anno sono riportati i valori massimi e minimi rilevati giornalmente e le rispettive medie mensili unitamente alla temperatura media del mese, dell'anno cui si riferiscono le osservazioni, se disponibili, e del precedente periodo di osservazione.

Tabella II - Per tutte le stazioni della Tabella I sono riportate:

- a) le medie mensili ed annue delle massime e minime temperature osservate giornalmente e le medie mensili ed annue delle temperature diurne. Come "temperatura diurna" è assunto il valore della semisomma delle temperature massima e minima osservate in uno stesso giorno;
- b) le temperature estreme (massima e minima) osservate in ogni mese, nell'anno ed il giorno nel quale sono state osservate. Tutte le temperature riportate sono espresse in gradi centigradi e corrispondono alle letture effettivamente eseguite; non è stata effettuata la riduzione al livello del mare.

NOTA: SPOSTAMENTO STAZIONI TERMOMETRICHE

Si fa presente che nel corso dell'anno 2007 è stato necessario effettuare lo spostamento di alcune stazioni termometriche per ragioni tecniche.

In linea di massima gli spostamenti sono stati contenuti e pertanto si è deciso di non rinominare le nuove installazioni ma di mantenere il nome storico.

Per chiarezza si è comunque ritenuto di mettere in evidenza tali spostamenti dividendo i dati di temperatura registrati dai sensori nelle diverse ubicazioni in due differenti tabelle quando lo spostamento è avvenuto all'incirca a metà dell'anno.

Si riporta di seguito l'elenco delle stazioni spostate nel corso del 2007 con dati suddivisi in due differenti tabelle:

- Cichero;
- Levanto;
- Varese Ligure;
- Padivarma.

Si ha inoltre un secondo gruppo di stazioni il cui spostamento avvenuto, con le stesse modalità sopra descritte, verso la fine del 2007, le cui serie storiche si interrompono temporaneamente negli ultimi mesi dell'anno per poi riprendere nel 2008.

Si riporta di seguito l'elenco del secondo gruppo di stazioni termometriche spostate:

- Dolcedo;
- Madonna delle Grazie;
- Villafranca Lunigiana.

Consistenza della rete termometrica al 31 Dicembre 2007

SEZIONE B - PLUVIOMETRIA

Abbreviazioni e segni convenzionali

Pluviometro totalizzatore	P
Pluvionivometro	Pn
Pluviometro registratore	Pr
Pluviometro elettronico	Pe
Precipitazione nevosa (misurata al pluviometro)	*
Precipitazione nulla	-
Dato incerto	?
Dato mancante	>>
Dato totalizzato]

Sono stampati in **grassetto** ed in *corsivo* rispettivamente i valori massimi ed i minimi.

Terminologia

1. - Altezza di precipitazione (mm): quoziente del volume di acqua raccolta nel pluviometro (compresa eventualmente la neve sciolta) per l'area della superficie orizzontale dell'imbutto raccoglitore.
2. - Giorno piovoso: giorno in cui è stata misurata un'altezza di precipitazione uguale o superiore ad un millimetro.
3. - Intensità media di precipitazione in un dato intervallo di tempo: quoziente dell'altezza di precipitazione nell'intervallo per la durata di questo.

Contenuto delle tabelle

Le tabelle sono precedute dall'Elenco e caratteristiche delle stazioni pluviometriche che hanno funzionato nell'anno.

I valori delle precipitazioni riportati sono espressi in millimetri di acqua e comprendono pioggia e neve fusa.

TABELLA I. Per ogni stazione riporta la quantità di pioggia caduta giornalmente ed i totali mensili ed annuo della precipitazione e del numero dei giorni piovosi. Per le stazioni dotate di apparecchiatura a lettura diretta (pluviometri comuni e pluvionivometri) le osservazioni vengono eseguite ogni giorno generalmente alle ore 9 ed il risultato viene attribuito al giorno stesso della misura: il valore segnato rappresenta quindi la quantità di precipitazione caduta nelle 24 ore che hanno preceduto la misura. Per le stazioni dotate di pluviografo si riporta, per ogni giorno, la quantità di pioggia che dal diagramma risulta caduta nelle 24 ore comprese fra le ore 9 del giorno precedente e le ore 9 del giorno di cui si tratta. Con carattere grassetto è stampato il massimo quantitativo giornaliero misurato per ogni mese.

TABELLA II. Per le stesse stazioni di cui alla Tabella I riporta i totali mensili ed annui delle quantità di precipitazione. Viene omessa la segnalazione relativa all'incertezza dei dati.

TABELLA III. Per le stazioni dotate di pluviografo riporta i dati relativi ai valori più elevati delle precipitazioni registrate nell'anno per 1, 3, 6, 12 e 24 ore consecutive appartenenti o no

allo stesso giorno. Sono considerate le precipitazioni iniziate dopo le ore 0 del primo gennaio e quelle eventualmente terminate dopo le ore 24 del 31 dicembre.

TABELLA IV. Riporta i massimi valori delle precipitazioni di tutte le stazioni del Compartimento verificatesi per 1, 2, 3, 4 e 5 giorni consecutivi appartenenti o no allo stesso mese. Sono considerati solamente i periodi il cui inizio cade entro l'anno anche se eventualmente sono terminati nell'anno successivo. Per le durate da 2 a 5 giorni le altezze possono essere talvolta uguali a quelle di durata inferiore; il periodo indicato è sempre quello nel quale si è verificata l'altezza considerata.

TABELLA V. Riporta il valore, la durata e la data delle precipitazioni di maggiore intensità e breve durata.

TABELLA VI. Elaborata in base alla misura dell'altezza del manto nevoso sul suolo. Riporta per i mesi da gennaio a maggio e da ottobre a dicembre, nei quali possono verificarsi precipitazioni nevose:

- a) le altezze in centimetri dello strato nevoso sul suolo presente nell'ultimo giorno del mese
- b) la quantità di neve, in cm, accumulatasi al suolo nel mese
- c) il numero dei giorni nei quali si è avuto un incremento dell'altezza del manto nevoso (precipitazioni nevose)
- d) il numero complessivo dei giorni di permanenza della neve sul suolo.

NOTA: SPOSTAMENTO STAZIONI PLUVIOMETRICHE

Si fa presente che nel corso dell'anno 2007 è stato necessario effettuare lo spostamento di alcune stazioni pluviometriche per ragioni tecniche.

In linea di massima gli spostamenti sono stati contenuti e pertanto si è deciso di non rinominare le nuove installazioni ma di mantenere il nome storico.

Per chiarezza si è comunque ritenuto di mettere in evidenza tali spostamenti dividendo i dati di precipitazione registrati dai sensori nelle diverse ubicazioni in due differenti tabelle quando lo spostamento è avvenuto all'incirca a metà dell'anno.

Si riporta di seguito l'elenco delle stazioni spostate nel corso del 2007 con dati suddivisi in due differenti tabelle:

- Cichero;
- Levanto;
- Varese Ligure;
- Padivarma.

Si ha inoltre un secondo gruppo di stazioni il cui spostamento avvenuto, con le stesse modalità sopra descritte, verso la fine del 2007, le cui serie storiche si interrompono temporaneamente negli ultimi mesi dell'anno per poi riprendere nel 2008.

Si riporta di seguito l'elenco del secondo gruppo di stazioni pluviometriche spostate:

- Dolcedo;
- Madonna delle Grazie;
- Villafranca Lunigiana.

Consistenza della rete pluviometrica al 31 Dicembre 2007

Appendice

Caratteristiche tecniche dei sensori

1. Temperatura dell'aria

· *Termometro a massima e minima (Tm)*

Principio di funzionamento	Lo strumento è costituito da un tubo ad U con i due steli comunicanti; i liquidi termometrici sono alcool e mercurio. La temperatura massima e minima vengono indicate dal bordo inferiore di due indici posti all'interno degli steli nella zona contenente alcool. Lo strumento è ubicato all'interno di una capannina in legno con aerazione naturale per la protezione dalla radiazione ambientale.
Campo di misura	-40°C ÷ +50°C
Precisione	+/- 1°C sull'intero campo di misura

· *Termometro registratore (Tr)*

Principio di funzionamento	L'elemento sensibile è costituito da una piastra bimetallica ad anello, accoppiata ad un braccio meccanico sul quale è ssato il pennino registratore. Le registrazioni vengono effettuate su carte diagrammali ssate su un tamburo collegato all'orologio a carica settimanale. Lo strumento è ubicato all'interno di una capannina in legno con aerazione naturale per la protezione dalla radiazione ambientale.
Campo di misura	Temperatura: 60°C; Rapporto: 1,5 mm: 1°C; Carta Diagrammale: -15°C ÷ +45°C
Precisione	+/- 1% su tutta la scala
Passo	Settimanale (180h): 1,6 mm/h

· *Termometro elettronico (Te)*

Principio di funzionamento	Il sensore è costituito da un trasduttore PT100, cl. A secondo DIN 43760. La termoresistenza, in equilibrio termico con l'aria circostante, viene percorsa da una corrente costante di valore modesto (circa 1mA), per cui la variazione di temperatura viene ricondotta ad una variazione di tensione ai suoi capi. La protezione dalla radiazione ambientale è affidata al contenitore autoventilante.
Campo di misura	-30°C ÷ +50°C
Sensibilità	0,05°C
Precisione complessiva	+/- 0,1°C sull'intero campo di misura

2. Precipitazione

· *Pluviometro comune (P)*

Principio di funzionamento	Lo strumento è costituito da un contenitore dotato di bocca tarata con supercie di raccolta di 400/1000 cm ² . La misura si effettua versando l'acqua raccolta in una provetta graduata sulla quale si legge direttamente l'altezza dell'acqua.
Precisione	0,1mm

· *Pluvionivometro (Pn) e pluviometro registratore (Pr)*

Principio di funzionamento	Il sensore misura la precipitazione raccolta da una bocca tarata (1000 cm ²), di forma circolare (ad imbuto), fornendo un segnale per ogni quinto di millimetro di acqua caduta (20 g). Il sistema di basculamento è costituito da una doppia e vaschetta, in acciaio inox con appoggio a perno; tale sistema è accoppiato ad un braccio meccanico sul quale è ssato il pennino registratore. Le registrazioni vengono effettuate su carte diagrammali ssate su un tamburo collegato all'orologio a carica settimanale. Il pluvionivometro è dotato di sistema riscaldatore alimentato a rete ad attivazione manuale per lo scioglimento della neve depositata nell'imbuto del raccoglitore.
Scala di misura	Carta Diagrammale: 10 mm
Precisione	+/- 2% su tutta la scala
Passo	Settimanale (180h): 5 o 10 mm/h
Sensibilità	0,2 mm

· *Pluviometro elettronico (Pe)*

Principio di funzionamento	Il sensore misura la precipitazione raccolta da una bocca tarata (400/1000 cm ²), di forma circolare (ad imbuto), fornendo un segnale per ogni quinto di millimetro di acqua caduta (8/20 g). Il sistema di basculamento è costituito da e una doppia vaschetta, in plexiglass appoggiata a coltello su supporto in materiale antifrizione o in acciaio inox con appoggio a perno. Il sistema di commutazione è invece un relè reed che, azionato da un magnete solidale con la coppia di vaschette, ad ogni basculamento produce una chiusura del proprio contatto.
Campo di misura	0÷300 mm/h
Sensibilità	0,2 mm
Precisione complessiva	± 2% su tutto il campo di misura
